

Scott Eisenberg

(714) 510-5300 | sleisenb@calpoly.edu | www.linkedin.com/in/scott-eisenberg2 | https://github.com/Scott-Eisenberg

EDUCATION

California Polytechnic State University | San Luis Obispo

B.S Candidate in Computer Science (GPA: 3.84)

Expected May 2028

Relevant Coursework: Data Structures, Object-Oriented Programming, Computer Organization, Discrete Structures, Systems Programming, Design & Analysis of Algorithms, Software Engineering, Computer Security, Multivariable Calculus

Honors: Dean's List: Fall 2024, Winter 2025, Spring 2025, Summer 2025, Fall 2025, Winter 2025 | President's List: 2024-2025

Experience

Spread Goodness

San Luis Obispo, California

Software Development Intern

October 2025 - Present

- Developed 15+ React components for a full-stack kindness-tracking web app using React, Vite, Zustand, Tailwind, and Firebase, enabling challenge creation, posting, and classroom interaction
- Wrote backend logic with Firebase RBAC and GeoQueries for location-aware tracking, reducing invalid submissions by ~35% while keeping query times under 200 ms
- Optimize load times by 40% through code splitting and lazy loading, while maintaining a clean record in weekly agile sprint cycles with no failed code reviews

California Polytechnic State University

San Luis Obispo, California

Undergraduate Researcher, IntelliSAR - AI Powered Search & Rescue Platform

February 2026 - Present

- Working on a search and rescue platform, building out the topography pipeline that feeds live terrain data into pathfinding and route analysis for missing person cases
- Develop React/Firebase dashboard components and AI Insights widgets that show commanders real-time outputs such as clue locations, command post data, and live weather metrics
- Helped design the agentic AI layer – probabilistic reasoning, path analysis, and knowledge graph generation—offloading the heavier ML work to the cloud to keep the frontend lightweight

Experience

California Polytechnic Security Education Club

San Luis Obispo, California

Corporate Liaison

November 2024 - Present

- Reach out to 100+ corporate leaders across 50+ companies, demonstrating professionalism and social skills
- Organize and execute 25+ annual technical events, including corporate sponsored CTF competitions, security workshops, and industry talks, growing member participation by 40%
- Compete in 10+ annual CTF competitions, specializing in cryptography and web exploitation competitions

Projects

Vectr | Next.js, TypeScript, Supabase, OpenAI API, Voyage AI, pgvector, Tiptap, Tauri

March 2025 - Present

- Building an AI-native product management workspace used by 20+ beta users, supporting 70+ product artifacts, across PRDS, strategy docs, acceptance criteria, and tradeoff analyses.
- Architected a RAG-powered retrieval layer that turns uploaded product docs into trusted workspace memory, enabling PMs to ask context-aware questions and draft artifacts grounded in their own PRDs, feedback, and strategy documents
- Developing a decision workflow that converts messy product context into 3 evidence-backed tradeoff packages and comparison matrices, helping PMs evaluate scope, timeline, stakeholder priorities, and launch risk before committing to a plan

Fake News Detection System | Python, scikit-learn, XGBoost, Pandas, NLTK

June 2025 - August 2025

- Engineered an ML classification pipeline achieving 95% accuracy on a 15,000-article dataset, using XGBoost ensemble methods to identify misinformation patterns
- Built a text preprocessing pipeline with NLTK stopwords removal, regex cleaning, and TF-IDF vectorization, improving model F1-score by 12% over baseline
- Compared 5 classification algorithms using cross-validation and documented results and model selection rationale

STARLY (Poly Prompts) | React, TypeScript, Vite, Three.js, Node.js, OpenAI API, Supabase, Deepgram

February 2025

- Collaborated with a team to build an AI-powered mock interview platform with a 5-stage React Router flow, generating personalized live voice interviews from resumes and job descriptions with STAR-based and body language evaluation
- Built an audio-reactive particle visualization using an 8,000-particle Three.js engine with pulsing dynamics tied to speaking state, delivering a polished visual experience that reacts in real time during interviews
- Engineered a real-time voice pipeline using voice activity detection, dual streaming STT (Deepgram + Whisper), and GPT-4o for seamless live transcription and low-latency AI responses

SKILLS AND INTERESTS

Programming Languages: Python, Java, C, C++, Typescript/JavaScript, SQL, RISC-V Assembly

Frontend: React/React Native (Expo), Next.js, Three.js, Tailwind CSS

Backend & Database: Spring Boot, Node.js, Firebase, Supabase

Tools/Infrastructure: Git/GitHub, Docker, AWS, Linux (Ubuntu)
